

TOOLKIT GUIDELINES

The UrbSTEAM online toolkit is meant to be a reference point for teachers and educators in early education, providing them with practical tools to teach STEAM through garden-based learning.

A “toolkit” is an action-oriented compilation of related information, resources, and tools that together can guide practitioners to develop their own activities.

The kit is available in 5 languages and includes both good practice examples and lesson plans templates to help you design activities around STEAM, urban gardening, permaculture and SDGs in a simple, child-friendly way.

This toolkit is divided into five sections:

1. Introduction
2. Learning Outcomes for teachers and educators
3. Best Tools found by partners at the national level
4. Lesson Plans examples and Templates made by partners
5. Further online resources
